Yellow Oxide of Iron and Titanium Dioxide IP

DESCRIPTION

Valif Tablets contains Vardenafil Hydrochloride an oral therapy for the treatment of erectile dysfunction. This monohydrochloride salt of vardenafil is a selective inhibitor of cyclic guanosine monophosphate (cGMP)-specific phosphodiesterase type 5 (PDE5).

INDICATIONS

Treatment of erectile dysfunction in adult men. Erectile dysfunction is the inability to achieve or maintain a penile erection sufficient for satisfactory sexual performance.

Vardenafil is not indicated for use by women.

CONTRAINDICATIONS

Vardenafil is contraindicated for patients with a known hypersensitivity to any component of the tablet.

Nitrates: Administration of Vardenafil with nitrates (either regularly and/or intermittently) and nitric oxide donors is contraindicated. Consistent with the effects of PDE5 inhibition on the nitric oxide/cyclic guanosine monophosphate pathway, PDE5 inhibitors may potentiate the hypotensive effects of nitrates. A suitable time interval following Vardenafil dosing for the safe administration of nitrates or nitric oxide donors has not been determined.

DOSAGE AND ADMINISTRATION

The recommended dose is once daily, taken orally approximately 60 minutes before sexual activity. Vardenafil can be taken with or without food. Sexual stimulation is required for a response to treatment.
